LAURA DERN

WHY SHE'S THE
WOMAN OF THE YEAR

5 GO Deep

As far as ecosystems go, coral reefs are among the most diverse in the world, teeming with tiny, colorful fish, seahorses, and anemones. Chances are rose-cut and VS-grade diamonds are not swimming among them, but therein lies the wonder of inspiration. Lugano Diamonds' one-of-a-kind Coral Reef cuff is clearly born of the world beneath the sea—even though it is, in fact, crafted in Los Angeles. And though marine life may be the cuff's origin, the delicate web is woven out of titanium, which is what makes the reeflike rainbow in the piece possible. Heat and electricity are applied to the metal in a process so precise that a change of a fraction of a degree results in an entirely different hue. Mother Nature and jewels, it seems, share a temperamental streak. **T&C**

MAKE IT NEW

Cameos were the jewelry choice of the ancients, but their status has slipped over the centuries. The comeback is now: Art collector Liz Swig tapped Cindy Sherman to design these pendants, which were then cut by a third-generation cameomaker in Italy.

(\$22,500), LIZWORKS.NET

The cuff's titanium bands mimic a sea anemone's gently waving tentacles, while more than 125 carats of diamonds evoke oceanic bubbles. **LUGANO DIAMONDS** CUFF (PRICE ON REQUEST), LUGANODIAMONDS.COM
